

BOOK REVIEW

Who doesn't want to be a millionaire? Most of us are chasing a comfortable life that is not confined to the spaces of what we only need. The thought of being a millionaire alone makes me feel accomplished and relieved that finally, I am out of the paycheck to paycheck spiral.

This is basically why The Millionaire Booklet by Grant Cardone was a best seller. Because it sounded like a fast track to something that we have all been dreaming for. In reality, there is no shortcut; it is a combination of strong commitment, consistent effort, and the right mindset.

The Millionaire Booklet is a compressed, easy to digest guide to change your thought process about money and ditching your "middle-class" thinking. The main points of the book are summed up in its 8-Step Wealth Creation Formula.

- Make the Millionaire Decision or simply asking yourself, "do you want to get rich?" If yes, then commit and make it happen.
- Understand the Millionaire Math. Do the math and make a strategy out of the answers.
- Increase Income. Don't rush in saving or investing but increasing your cash flows.
- Ask, "Who has My Money?" Find your target niche, build something they need, and sell it to them.
- Stay Broke. Never let the money sit around.
- Save to Invest, Not Save to Save. Saving is only for the middle-class; investing is the secret of the super-rich.
- Create Multiple Flows of Income. Find income flows that go well with your current income flow and never abandon it.
- Repeat, Reinforce, Hyper-focus. Apply the 10X Rule.

The Millionaire Booklet is concise, yet it is still overflowing with many wise words that are worth pondering. On page 11, Cardone advised readers to be very selective of who you get your financial advice and never take advice from a quitter or a pretender. I find this very important as one's thinking is crucial in a game of setting a specific mindset. Someone we look up to dramatically influences our decisions that might misdirect our focus. I super love the eight (8) steps on how to become a millionaire.

What made this 46-page book loved by many is because it's realistic. The eight (8) steps on becoming a millionaire are achievable and applicable to all sorts of people. I have always been a believer in hard work, and I totally agree that all things are possible through it, especially if matched with the right mindset. The book, however, would have been much better if the author's effort to sell his other products and courses was lessened.

Being rich could mean different from another perspective; it could be a financial status or a state of mind. Either way, your financial goals in life doesn't define you as a person, and as Cardone said, money has nothing to do with being happy or unhappy. Let's say you reached the million-mark, it doesn't mean you have to stop there. Being rich comes with responsibility.
